Introducing Super3 Sam!

THE SUPER3: Information Skills for Young Learners

Michael B. Eisenberg and Laura Eisenberg Robinson

Help younger students become critical thinkers and problem-solvers across all curriculum areas! Use the Super3, a spin off from the widely used Big6, to help students in grades PreK-2 develop crucial problem-solving skills.

- Learn how to break down the problem-solving process so that younger students "get it" and remember it.
- The Super3 provides a "process model" for children to learn and use in order to be successful with the various tasks they undertake.
- Helps younger students recognize what they are doing so they can label and talk about their research.
- Provides an easy transition into the Big6.
- Ready-to-use worksheets include explanations for daily implementation of the Super3 into the classroom.

Mike Eisenberg and Laura Eisenberg Robinson have adapted the widely used Big6 research approach for students in grades PreK-2 by creating the Super3. Younger students can become better thinkers and problem-solvers by using the three simple steps: Plan, Do, Review.
